

Overview: Growing older should mean growing wiser, not lonelier. For adults over 50, existing social spheres lack meaningful opportunities for both enrichment and connection. While this problem existed before COVID-19, the isolating effects of the recent epidemic have accelerated our desire to build a solution for it. Groove gathers adults over 50 who are looking to build hard skills for hobbies and soft skills for a new phase of life. Through curated content, accessible technology, and a supportive peer-to-peer learning model, we provide a meaningful way to find camaraderie. Right now, Groove operates virtually, but once the reality of the world shifts the goal is to also host offline experiences.

Role: Back-End Web Developer Internship

Role description: The Back-End Web Developer will support the buildout of the Groove digital product, working closely on both the design (either directly or in partnership with a designer) and execution of it. This intern will be encouraged to contribute from a strategic perspective as well, thinking through important features and functionality for the back-end.

Who you are:

- Passionate about the older adult population, with a deep empathy for the user
- Past projects showcasing knowledge of coding language and experience
- Languages preferred: Java, Python, SQL
- Nice to have: UI/UX experience or interest in learning more about them

Logistics:

- Apply by emailing inwithgroove@gmail.com, along with your resume and a few sentences about your interest in the role
- Harvard Business School female founders, excited about mentoring and bringing on undergraduate interns
- Duration: Desire at least 6 weeks, but flexible
